

FLEX SANDERS

NEW!

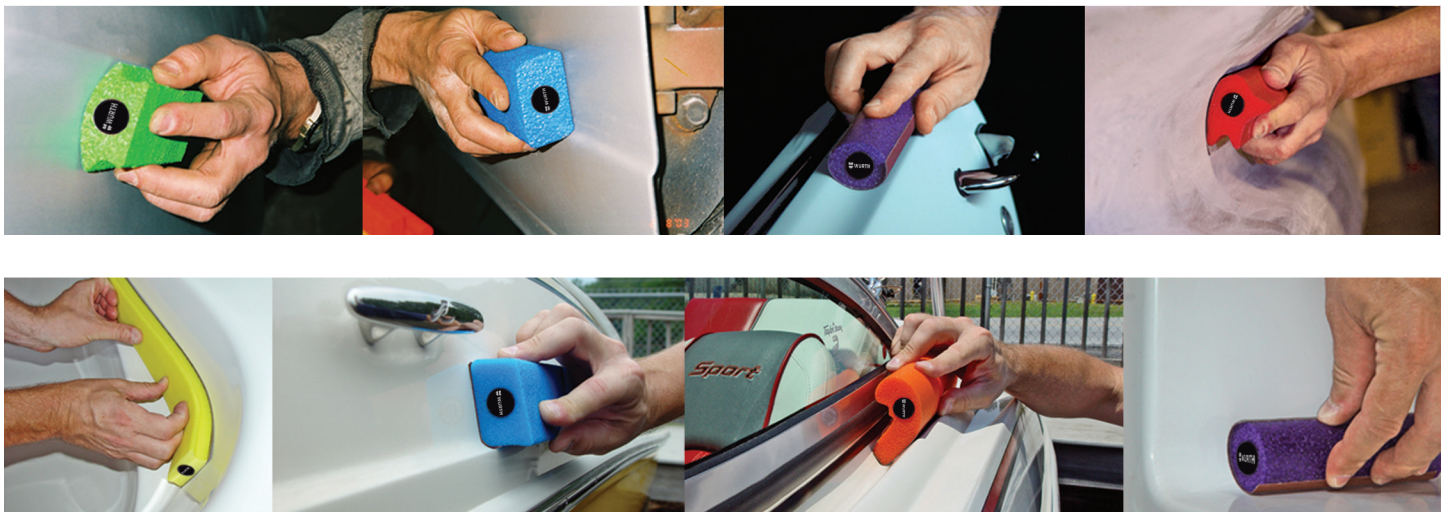

FLEX SANDERS

- Soft rounded edges virtually eliminate gouging
- Tapered edges for sanding hard-to-access areas
- 6 blocks of 3 different densities vary in firmness while soft enough to be compressed into places that are hard to sand
- Super lightweight and designed for comfort no matter how they are held
- Extremely durable & resistant to most solvents
- Blocks will maintain curvature until sandpaper is removed
- 8" and 11" blocks sand large curved (high crowns) areas with ease, blocks conform to the surface being sanded

AUTO • CARGO • MARINE • & MORE!

CONFORMS TO ALMOST ANY SHAPE!

Designed for use with our adhesive-backed sandpaper.
Works with wet or dry sandpaper.

1. Place sandpaper (grit down) against the contour or desired surface curvature. Place one end of the sanding block against starting end of sandpaper.

2. While continuing to hold the starting end of the block down against surface, slowly apply downward pressure to the remainder of the block, pushing the block onto the sandpaper.

3. At this point the block will conform itself to the curvature of the sandpaper.

4. The adhesive of the sandpaper in turn holds the soft block in the desired position.

EASILY SAND DIFFICULT CONTOURS!

SUPER-FLEX SANDPAPER

CLOTH SANDPAPER (ADHESIVE BACKED)

- Specially formulated adhesive, cloth-backed sandpaper that has been pre-flexed, enables you to sand even the most demanding contour
- Super flexible J-weight sandpaper is extremely pliable - will not tear while being applied
- Does not load up and lasts five times longer than ordinary sandpaper

2 3/4" x 29 1/2' roll

WET-DRY SANDPAPER (ADHESIVE BACKED)

- Sandpaper adheres while submerged in water!
- Soft and flexible
- Does not load up
- Outlasts other by four times

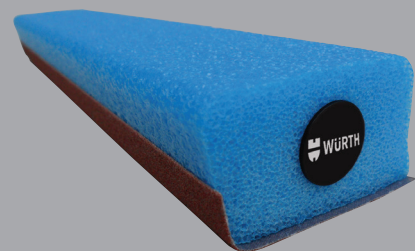

2 3/4" x 29 1/2' roll

Want to transform a Flex Sander into a rock-hard sander? Here are 3 ways:

Method 1

Place Sandpaper (grit down) against a flat surface. Position block onto paper and while applying downward pressure roll the block to adhere the sandpaper evenly to the sides.

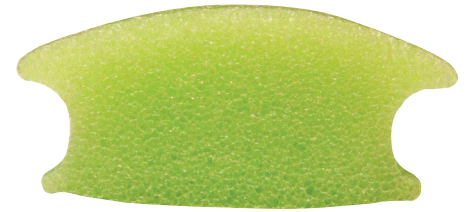

Method 2

Begin by performing a 2" wide masking over about 1/2-3/4" of the sander, applying downward pressure. Then apply masking tape evenly over the entire sander.

two sides of the
block.

FLEX SANDERS FAQ

Q: Can I wet sand with the blocks?

A: Yes, absolutely! The blocks really work great for wet sanding because they float and won't end up in the bottom of the bucket with all the contaminating dirt. Super-Flex® wet/dry sandpaper is available in grits from 400-2500.

Q: Do the blocks come in multiple lengths?

A: Yes. They come in 5", 8" and 11" sets of six and individual lengths of 16", 20" and 24".

Q: The blocks are super lightweight, but are they tough enough to hold up?

A: The blocks are extremely durable as long as you don't catch them on a rivet head or tear them on something sharp.

Q: How can I clean the blocks after use?

A: The tough skin and closed cell foam construction make for easy cleanup. Simply use water or air to clean off sanding dust as adhesive-backed sandpaper will not leave residue on the blocks. Moreover, testing has shown that even prolonged emersion in acetone and lacquer thinner will not damage the blocks.

Q: Do I have to use SUPER-FLEX® SANDPAPER on the FLEX SANDERS?

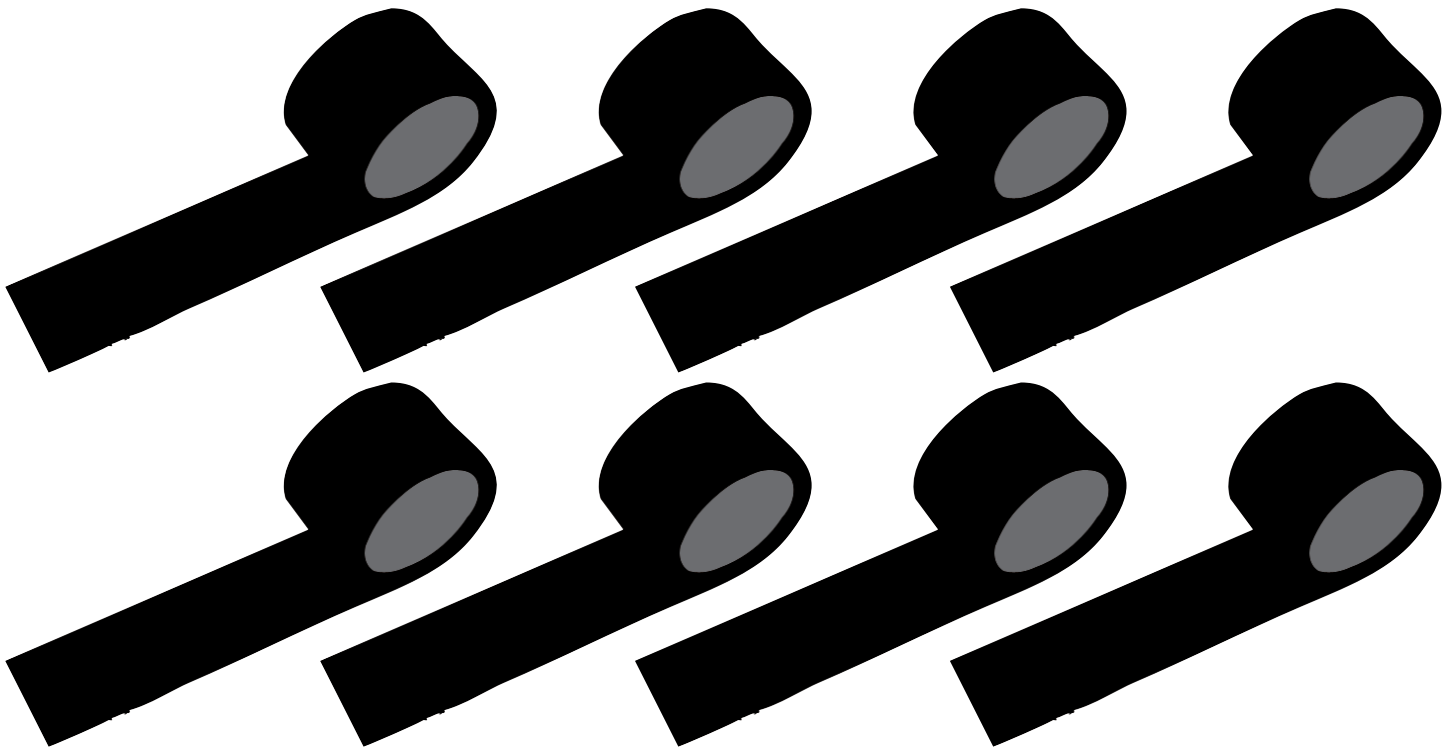

A: No. The SUPER-FLEX® sandpaper, however, has been pre-flexed by being run through a series of rollers that bend and flex it both side-to-side and lengthwise unlike conventional abrasives on the market that, until the arrival of the FLEX SANDERS, have been used on blocks that have little or no ability to flex. As a result, the SUPER-FLEX® sandpaper has been put under stress so that it will be more flexible when it is applied to the FLEX SANDERS which have been designed to take the shape of the surface being sanded. You can use other products; however, if the alternative dry sandpaper does not have an adhesive back, it will have to be gripped continuously by the fingers of the user and will not take the shape of the surface being sanded. If the alternative dry sandpaper does have an adhesive back, it must be flexible enough to conform to the shape of the block which has been reconfigured to fit the shape of the surface being sanded and yet do so without ejecting grit and cracking and leaving a ragged edge that will damage the surface.

Q: Why should I pay more for a piece of SUPER-FLEX® SANDPAPER when I can purchase other products for less money?

A: You will find that you will use many sheets of comparably sized "cheaper" dry sandpaper to do a job that you could do with one sheet of SUPER-FLEX® that will still have usable life when you are done. It won't spit grit even when wadded up into a ball and won't load up as the sanding debris can easily be shaken loose simply by tapping the block on a hard surface or blowing it off with air. As for wet sandpaper, there isn't a close comparable on the market to the SUPER-FLEX® WET/DRY that ranges in grits from 400 to 2500. It adheres to the FLEX SANDERS eliminating the need to constantly grip the paper against the block and can be repeatedly applied and removed with hardly any loss of adhesive capacity. It can be left on the block in water overnight and be ready to do more sanding the next day. And it also floats!
